What are herbal fluid extracts?

Fluid extracts are prepared so that 25ml of the extract equals to 25g of the herb, making them 3-4 times stronger than tinctures. Alcohol Free Fluid Extracts maybe prepared in the same way but using vegetable glycerine as the solvent. 5-10 drops of the extract in water is the normal dosage.

Nature's Answer – What are alcohol free fluid extracts?

Alcohol free extracts are produced using alcohol, water and natural extractants. All alcohol and extractants are then removed by a cold extraction process yielding a Holistically Balanced standardized extract. Holistically Balanced guarantees that the constituents of the extract are in the same synergistic ratios as in the plants.

Herbal Remedies

After many years of selling Swedish Bitters produced by other suppliers, we decided to introduce our own version. The Baldwin's Swedish Bitters uses the original formula laid out in the Maria Trebens book Health Through Gods Pharmacy but with the Aloe, which because of Brexit is now impossible to obtain, replaced by Wormwood.

Swedish Bitters

Swedish Bitters is a traditional formula made popular by Maria Treben, an Austrian Herbalist. More information about the various benefits of Swedish Bitters can be found in the book, Health through God's Pharmacy.

Methyl Folate

Folates are normally found in a wide variety of foods and are commonly consumed through a diet of green leafy vegetables, sprouts, fruits, brewer's yeast and animal products such as milk and dairy products, egg yolk and liver. Unfortunately, folates contained in foods are unstable and susceptible to oxidation; they rapidly lose activity during food processing, manufacturing and storage and have a bioavailability range of 25-50%, depending on the kind of food. Humans cannot synthesize folate and because of its water-soluble nature, the body only stores folate to a limited extent. For this reason, folate represents a dietary requirement and must be consumed by diet. Whether we ingest food containing natural synthetically-derived folates, they are metabolized to 5-methyltetrahydrofolate, which is considered the biologically active form of the B Vitamin folic acid.
